Introduction

The Guyana Labor Force Survey (GLFS) is a joint effort of the Guyana Bureau of Statistics (BOS) and the Inter-American Development Bank (IDB) that intends to generate regular and timely data on the most important dimensions of the labor market in Guyana in order to support the design, monitoring and evaluation of labor policy. It provides data on employment, unemployment, underemployment, employment informality, population not in the labor force, hours of work, work and non-work income, as well as on multiple demographic characteristics. Also, the GLFS collects indirect information on emigrants, provided by the surveyed households.

The data collected every quarter are used to compute a set of standard labor market indicators such as the employment-population ratio, the unemployment rate and the participation rate, as well as many other employment indicators broken down by industry, occupation, large geographic areas and demographic characteristics like gender, age and ethnic group.

The GLFS is a continuous survey with quarterly data deliveries. Its second round was conducted in the fourth quarter of 2017 and visited a probability sample of 3,783 households and 13,853 individuals over a 12-week period, from October 5th through December 27th. It was fielded by 11 teams formed by a total of 31 interviewers and 11 supervisors headed by a Project Manager based at BOS headquarters, with technical support from Sistemas Integrales.

This report describes the main methodological aspects of the survey – the sample design and the pertaining estimation procedures, the topics covered by the questionnaires, and the organization and quality assurance of fieldwork – and presents the content and organization of the resulting datasets that will support numerous forthcoming analytical activities.

GLFS sample design

The GLFS is a continuous nationwide survey started in July 2017. Following the conventional practice for population surveys, its target population includes all persons who reside in households and excludes the institutionalized population, i.e. persons living in prisons, nursing homes, long-term or dependent care facilities, long-term mining camps or full-time members of the armed forces. According to the 2012 Population and Housing Census, Guyana had a household population of 723,181 persons living in 204,625 households.

The GLFS is run every quarter of every year on a continuous basis, and is representative of four geographic domains: a) the entire national territory; b) the coastal urban areas; c) the coastal rural areas and d) the interior. It is not representative at the region level, except for Region 4 where the country capital city, Georgetown, is located.

The GLFS sample includes approximately 4,000 households every quarter, resulting in a total of about 15,000 individuals out of which about 11,000 are 15 years old or above. This sample is based on a stratified two-stage probability design. Each quarterly sample spreads over 12 consecutive weeks and is distributed across 15 strata corresponding to urban, rural, coastal and interior areas in the 10 Guyana regions. Furthermore, in order to attain a uniform spatial-time representativeness the GLFS quarterly sample is allocated into 12 weekly replicates, which means that the overall quarterly sample is achieved through the aggregation of 12 smaller samples, called replicates, that spread throughout the entire country and that are nationally representative by themselves.

The **first sampling stage** is formed by 360 Primary Sampling Units (PSUs), which are groups of Census Enumeration Districts (EDs). The sample of PSUs was initially allocated into the 15 strata. Then, using the 2012 Census as a sample frame, PSUs were selected systematically within each stratum with probabilities proportional to their size, using the number of households reported by the Census as measure of size. Figure 1 shows the spatial distribution of the 360 selected PSUs.

For the **second sampling stage** all households in every selected PSU were first listed¹ over the months prior to the survey start. Once the listing operation concluded, the households registered in each PSU were randomly grouped in groups of four households called **blocks**, and four blocks were selected with equal probabilities in each PSU² each quarter. Finally, within the interviewed households, demographic information was collected for all household members and labor force information was registered for members 15 years of age and above.

¹ The household listing operation was conducted between December 2016 and April 2017 in order to generate an updated sampling frame for the second sampling stage.

² Three of the households in each block were designated as the *target* households. The fourth household was a *backup* that could be used if exceptional circumstances (such as the dwelling being empty throughout the full week of data collection in the cluster) made it not possible to interview one of the target households.

Figure 1: GLFS selected Primary Sampling Units

To account for the unequal inclusion probabilities, base weights were computed in accordance with the GLFS sample design. Once the quarter was finalized the base weights were adjusted for nonresponse³ and a poststratification was applied in accordance with overall regional population projections developed by the Guyana BOS.

GLFS rotation scheme

A required feature of the GLFS – as of other labor force surveys in other countries – is the capability of obtaining accurate estimates of the change in Labor Market Indicators (LMIs) over time, and thus monitor their evolution. In other words, the GLFS should be able to determine, for example, whether a particular decrease or increase in the unemployment rate is statistically significant, and it should ideally be able to detect even small changes.

To measure change over time more precisely, the GLFS sample design includes rotating panels. From one quarter to the following all PSUs are kept the same, but some households within each PSU are kept in the sample whereas the rest are replaced by new households. As a result, one part of the sample – the panel

³ Nonresponse levels were kept low throughout the entire fieldwork. The unweighted nonresponse rate in the fourth quarter of 2017 was 10.1%, composed of 3.4% Refusals, 4.1% No contacts and 2.6% Other reasons.

– overlaps in both quarters. Under these conditions, the design-based variance of the estimator of change $\hat{\Delta}$ for the indicator of interest is given by

$$\text{var}(\hat{\Delta}) = \text{var}(\hat{\theta}_1) + \text{var}(\hat{\theta}_2) - 2 \text{corr}(\hat{\theta}_1, \hat{\theta}_2) \sqrt{\text{var}(\hat{\theta}_1) \text{var}(\hat{\theta}_2)}$$

where

$\hat{\theta}_1$ is the cross-sectional estimator of the indicator of interest in quarter 1

$\hat{\theta}_2$ is the cross-sectional estimator of the indicator of interest in quarter 2, and

$\hat{\Delta}$ is the estimator of net change between $\hat{\theta}_1$ and $\hat{\theta}_2$

The above expression shows how the sampling variance of the estimator of change is reduced – and thus the precision of the change estimate is increased – due to the correlation between $\hat{\theta}_1$ and $\hat{\theta}_2$, which is determined by the magnitude of the overlap between both successive samples. Thus, the larger the overlap between the two samples in two successive quarters, the larger the correlation $\text{corr}(\hat{\theta}_1, \hat{\theta}_2)$ and the larger the precision of the change estimate. However, even if a complete overlap between successive samples would yield the largest precision of the change estimate, this is not used in practice when the objective is to implement numerous successive survey rounds since it would result in increasingly high levels of attrition as time goes by.

This is why the GLFS implements a *rotation scheme* – or *rotating panel* – with the purpose of generating successive samples that overlap partially. Different rotation schemes, which apply different overlap patterns, are often used in population surveys when the main objectives are both cross-sectional estimates and short-term estimates of change. The specific type of rotation scheme and its corresponding overlap pattern have a direct effect on:

- The precision of the change estimate between two different periods,
- The precision of the estimates obtained by aggregating samples over time, and
- Attrition due to respondent's fatigue.

Consistently with the practice in other Caribbean countries, the GLFS adopted a rotational scheme that maximizes simultaneously the quarter-to-quarter and the year-to-year overlaps and thus permits to obtain more precise estimates of change between consecutive quarters and between a quarter and the same quarter in the following year. 50% of the sample in every quarter is the same as in the previous quarter, and 100% is the same as in the same quarter of the previous year. As a result, the precision of the estimates of change quarter to quarter and year to year are simultaneously optimized. This is achieved in practice by way of rotating the four blocks (each composed of three target households and one backup household, as explained above) included in the sample each quarter, as shown in Figure 2 below:

Figure 2: GLFS rotational scheme

Year	Quarter	Bocks included in the sample			
2017	3	1	2	3	4
2017	4	5	6	3	4
2018	1	5	6	7	8
2018	2	1	2	7	8
2018	3	1	2	3	4
2018	4	5	6	3	4
2019	1	5	6	7	8
2019	2	(same as in Quarter 2 of 2018, etc.)			

Estimation and sampling error

When estimating standard errors and confidence intervals for statistics such as means, proportions and ratios, as well as linear and non-linear regression parameters, all GLFS complex sample design features (stratification, clustering, weighting due to unequal inclusion probabilities and nonresponse adjustments) need to be accounted for. If the complex sample design is not accounted for, standard statistical software will assume that the sample is a simple random sample (SRS), which would result in biased estimates and unrealistically low sampling variances. Hence, standard errors would be understated, confidence intervals would be narrower and test statistics would be biased.

The two most usual approaches to estimating sampling errors for complex sample data are through 1) the Taylor Series Linearization (TSL) of the estimator and the corresponding approximation to its variance, or through 2) the use of resampling variance estimation techniques such as balanced repeated Replication (BRR), jackknife repeated replication (JRR) and bootstrap. Stata and other statistical software packages use the TSL method as the default for estimating sampling errors (expressed in the sampling variances, standard errors, coefficients of variation and confidence intervals) for complex sample data. Annex 1 indicates the Stata syntax that should be used when analyzing GLFS data to account for its sample design features and weighting. Table 1 presents the estimates, standard errors, 95% confidence intervals and coefficients of variation for three key GLFS indicators for quarter 4 and quarter 3, 2017.

Table 1. GLFS Q4 and Q3 2017. Estimates and sampling errors for selected indicators.

Indicator	Quarter	Estimate	Standard error	95% confidence interval	Coefficient of variation (%)
Employment-population ratio (%)	Q4 2017	47.89	0.64	(46.63 , 49.16)	1.34
	Q3 2017	49.21	0.65	(47.94 , 50.48)	1.31
Unemployment rate (%)	Q4 2017	12.19	0.55	(11.14 , 13.32)	4.55
	Q3 2017	12.04	0.52	(11.06 , 13.11)	4.33
Average hours usually worked per week in the main job	Q4 2017	45.65	0.38	(44.90 , 46.41)	0.84
	Q3 2017	46.13	0.39	(45.37 , 46.90)	0.84

All three indicators show a slight change in their point estimates between quarters 3 and 4. However, when testing these changes it is confirmed that none of them is statistically significant, which means that no real change is detected. Table 2 displays the estimated change between Q3 and Q4 for the three indicators, the standard error and p-value corresponding to these change estimates, and their 95% confidence intervals.

Table 2. Test of differences between Q4 and Q3 2017 for selected GLFS indicators.

Indicator	Q4 - Q3	Standard error	t	P> t	95% confidence interval
Employment-population ratio	-1.316	0.7994	-1.65	0.101	(-2.8886 , 0.2564)
Unemployment rate	0.14108	0.6708	0.21	0.834	(-1.1784 , 1.4606)
Average hours usually worked per week in the main job	-0.4811	0.4912	-0.98	0.328	(-1.4472 , 0.4849)

Annex 1 includes the Stata syntax that should be used to test the change of an indicator between quarters, in order to account for the sample design features and the sample overlapping.

Survey tools and methods

The core objective of the GLFS is to produce labor force statistics for the population of Guyana. In addition, the survey captures information about basic demographic characteristics and emigrants. Demographics and educational features are collected for all individuals irrespective of their age, whereas labor force characteristics are measured for individuals 15 years of age and over, in accordance with the working-age population definition used in Guyana. Data on emigrants are obtained indirectly through the interviewed respondents and refer to those individuals who used to reside in the surveyed households but have been living abroad for over 6 months at the time of the interview⁴.

Questionnaires

A Household Questionnaire (HQ) and an Individual Questionnaire (IQ) were designed, piloted and programmed into two CAPI (Computer Assisted Personal Interviewing) applications that were installed in the hand-held devices used by the interviewers in face-to-face interviews.

The Household Questionnaire collects information on the following topics from all household members irrespective of their age:

- Demographic characteristics
- Recent migration (internal and international)
- Education
- Emigrants
 - Basic demographics
 - Current country of residence
 - Education
 - Labor status before leaving Guyana
 - Current main activity

The Individual Questionnaire focuses on the labor characteristics of the population 15 years old and above:

- Vocational training
- Labor force status
- Status in employment
- Hours worked
- Time-related underemployment
- Informality
- Industry
- Occupation
- Unemployment
- Main features of the last job
- Work earnings
- Non-work income

The two full questionnaires are presented in Annex 3.

⁴ The GLFS data on emigrants should be interpreted with caution since they only refer to those emigrants who used to live in a household that still exists in Guyana, i.e. the GLFS does not capture any data about those emigrants that moved out of the country along with their entire household.

Datasets

The GLFS Quarter 4 2017 released two datasets.

- GLFS_174_ind: contains all the data recorded from the individuals living in the surveyed households.
- GLFS_174_emig: contains all the data collected about the former household members who have been living abroad for over 6 months.

The GLFS codebook with the list and characteristics of all variables in the datasets is included as Annex 2.

Restricted and Public use datasets – Anonymization

The Guyana Bureau of Statistics is prohibited by law from releasing any data that would give information that relates to any identifiable person. This is why each of the GLFS data files exists in two different versions: a “Restricted” version that contains all the variables included in the questionnaire; and a “Public” version, from which certain variables (such as the respondent names, addresses, telephone numbers and household geocodes) have been excluded in order to prevent the disclosure of identifiable data and thus guarantee statistical confidentiality. Both versions include the weights and sample design variables required for the analyses

The GLFS registers the geocodes of every interviewed household, which are only included in the Restricted version of the datasets. However, both Restricted and Public versions include the geocodes of the centroids of the PSUs where the sample households are located.

Coding of industry and occupation

The vast majority of the categorical questions in the GLFS are pre-coded. The only exceptions are the codes of industry and occupation.

The coding of industrial activities and occupations is generally considered a very specialized task that requires years of experience and cannot be entrusted to survey fieldworkers. In fact, the 4-digit International Standard Industrial Classification of All Economic Activities (ISIC) and the International Standard Classification of Occupations (ISCO) have hundreds of categories and their interpretation is far from trivial. For this reason, statistical agencies generally ask the interviewers to simply write down detailed descriptions in the questionnaire and have a professional coder provide the codes at the central offices at a later stage. Unfortunately, this can have an impact on the timely availability of the survey data.

The GLFS interviewers were asked to write down detailed descriptions on the questionnaire, as interviewers in other surveys usually do. In addition, they were also asked to provide a code, using the ISIC and ISCO⁵ tables embedded in the GLFS CAPI application by means of a built-in phonetic search engine. All the interviews fulfilled during a survey week were then transferred to the survey server at the end of that week, and the ISIC and ISCO codes entered by the interviewers in the field were assessed by

⁵ The ISIC Rev. 4 and the ISCO-08 were used. Interviewers attended specific sessions on the coding of industries and occupations as part of their training before the survey start.

two coders at the BOS offices on a continuous basis. Whenever a code entered by an interviewer did not correspond to the full description registered by that interviewer, the code was rectified by the coders.

Individual panel identifier

All three versions of the *GLFS_174_ind* dataset include a numeric panel identifier (variable *panelid*) for each individual living in each sample household, which allows for matching the individuals in the household along the rotating panels in successive quarters.

Fieldwork organization

The survey is fielded by a managing team composed of one manager and two assistants, eleven supervisors and thirty-one interviewers organized in eleven field teams. Each interviewer is responsible for visiting one PSU with 12 sample households each week, over the 12 weeks of each quarter. Having the interviewers' territories overlap facilitates fieldwork management and quality assurance (see the *Quality Assurance* section below).

Interviewing. In many Labor Force Surveys it is usually permitted to collect the data for all household members by interviewing one sole member who answers on behalf of them, which of course entails several validity issues, especially for some specific labor-related questions. A key feature of the GLFS's fieldwork is that no proxy reporting is permitted, i.e. each member is asked to answer personally the questions related to his/her individual status. The only exceptions are children below 15 years of age, in which case an adult in charge must respond, and household members who are not present at the household throughout the survey week because of travel reasons out of the city or town of residence. As a result, interviewers usually have to make several appointments with different household members on different days and times to collect all the information required.

Supervisors. Each supervisor is in charge of overseeing the interviewers in his/her team, give them the necessary support and assure the quality of the work, primarily by re-visiting the interviewed households. He/she is also responsible of verifying and signing off the Final Result of each sample household assigned to the interviewers in his/her team and of personally uploading the data collected by the interviewers to the survey server.

The Comprehensive Survey Quality Assurance (CSQA) framework

All the data collected by the GLFS is subject to the Comprehensive Survey Quality Assurance process, which is built on four successive and linked stages: integration of computer quality controls to fieldwork, central monitoring of data quality indicators, in-site fieldwork supervision through double-blind check-up visits, and systematic auditing of randomized interview voice recordings with double data entry.

1. *Integration of computer quality controls to fieldwork*

The CAPI applications used to collect the survey data include a set of built-in consistency checks whose purpose is to alert the interviewer of possible mistakes or inconsistencies while registering responses so that the identified inconsistencies can be solved by direct verification with the respondent. All the data are subjected to three types of checks while being entered: range checks, skip patterns and consistency checks.

- a. *Range checks* are intended to ensure that every variable in the survey contains only data within a limited domain of valid values. Categorical variables should take on only defined values and any other value is flagged as an error. Chronological variables should contain valid dates and numeric variables are verified to lie within prescribed minimum and maximum values. If the error is merely typographical, the interviewer who enters the data can correct it immediately. However, the data entry program allows the interviewer to enter an out-of-range value if it correctly reflects what has been observed and is not due to a typographical error.
- b. *Skip patterns*. The CAPI applications include all the skip patterns corresponding to specific questions. Thus, the applications verify that the right questions are asked from each respondent depending on his or her characteristics or on the answer given to previews questions.
- c. *Consistency checks* verify that the answer to one question is consistent with the answers to other questions.

2. *Central monitoring of data quality indicators (DQIs)*

On top of the computer quality checks carried out during the data entry, which focus on each specific interview, it is also necessary to monitor the overall work being done by all the interviewers together. To this purpose, the whole package of information that is weekly uploaded from the field to the survey server is centrally processed by the managing team located at the BOS offices. This permits to assess the quality of the work being done by each interviewer by comparing the data from all the different interviewers.

The managing team analyzes a set of over twenty data quality indicators (DQIs) every week on an interviewer basis and decides whether special supervision is needed on any particular interviewer whose work appears to be inadequate, or whether new and more precise instructions should be given. Thus, data monitoring provides early warnings so that the necessary corrective actions can be carried out promptly.

Monitoring of DQIs implies very active survey management and requires that all the data collected in the field be immediately transferred to the survey server on a continuous basis and throughout the entire fieldwork period. The GLFS DQIs Dashboard for the fourth quarter of 2017 is presented below, along with an excerpt of some specific DQIs and their trend over the 12 weeks of fieldwork.

The GLFS DQIs Dashboard

The DQIs Dashboard is built on the more than 20 monitored DQIs and delivers a quick summary of the key issues related to data quality assurance. For example, it shows how many household and individual interviews have been accomplished at the end of each week and allows to have a precise picture of unit nonresponse and its components, as well as of item nonresponse (missing values) for relevant study variables.

One key feature is the Interviewer Risk Index, a composite indicator that grades the overall performance of all the interviewers on the basis on their performance in specific DQIs which are differentially weighted. The Risk Index permits to rank the interviewers and rapidly identify the ones with the worse overall performance, who may be affecting the quality of the collected data, in order to take the pertaining actions in a timely fashion. Of course, the analysis of the Interviewer Risk Index should be accompanied by the assessment of the interviewer’s performance in the specific DQIs.

Some selected DQIs are presented below.

Percentage of individuals 15 years and over with proxy reporting, by interviewer, team and week.

Proxy reporting for persons 15 years of age and above was only permitted if the person to be interviewed was not present at the household throughout the survey week because of travel reasons out of the city or town of residence. The overall prevalence of proxy reporting over the fourth quarter of 2017 is 6.2%, which means that 93.8% of the individuals responded by themselves and the data for the remaining 6.2% were provided by other household members. However, proxy reporting is usually quite differential by interviewer, since direct interviewing entails several visits from the interviewer to the same household on different days and time. This is why this was one of the indicators closely monitored from the beginning of fieldwork on an interviewer basis.

PERCENTAGE OF INDIVIDUALS 15 AND OVER WITH PROXY ANSWER, BY INTERVIEWER AND WEEK

Team	Interviewer	Week												Total
		1	2	3	4	5	6	7	8	9	10	11	12

[Back to Dashboard](#)

Percentage of individuals 15 years and over with training, by interviewer, team and week.

Some interviewers may undercount the number of persons who received vocational training in order to reduce their work burden, since every person who received such training should be asked a set of specific questions that should be skipped for those who did not receive it. In some surveys this behavior usually tends to intensify as fieldwork unfolds and, hence, the recorded number of persons with vocational training may decrease over time. The GLFS monitored this indicator to avoid such behavior, which would have a direct impact on the related estimates. The following two tables describe the evolution of the percentage of persons aged 15 years or more who received vocational training in the past 12 months, by interviewer and team.

PERCENTAGE OF TRAINEES 15 AND OVER, BY INTERVIEWER AND WEEK

[Back to Dashboard](#)

Percentage of employees with missing EXACT net income, by interviewer, team and week.

With regards to income questions, when the respondent does not want to answer or claims he/she does not remember the exact amount, a good interviewer should re-ask the question and explain how important it is for the survey or ask for the best estimate. Since some interviewers may fail to proceed

this way, item nonresponse may be quite differential by interviewer and should be monitored. As a result of this monitoring, in the fourth quarter of 2017 the GLFS was able to obtain an EXACT wage amount for 89.0% of the interviewed employees. As regards the remaining 11.0%, about half of these respondents indicated an income range.

3. Direct fieldwork supervision through check-up visits

On-site fieldwork supervision via check-up interviews is an essential duty of the supervisors. It consists in verifying that the interviewers have applied the different questions to the adequate respondents and that they have recorded the answers properly. This is achieved by having the supervisors re-visit a subsample of the interviewed households and re-ask some key questions from the questionnaire.

Check-up visits are conducted within the seven days following the interview and the households to be re-visited are randomly selected, with a focus on specific interviewers based on the results obtained from the central monitoring of data quality indicators. Thus, this procedure helps maintain high standards among the interviewers and flag any unsatisfactory interviewers. During the check-up visit the supervisor enters the respondent's answers using a Supervision CAPI application developed for this purpose and then uploads the data to the survey server. Later on, the managing team cross-checks these data versus the data previously registered by the interviewer for the same respondents and reports any mismatch.

4. Auditing of randomized voice recordings and double data entry

Randomized voice recording consists in assigning a probability of being recorded to every question in the questionnaire. These probabilities vary according to the importance of the questions and may be 100% for the key ones. As a result, every question in the questionnaire has a chance to be audio recorded in every interview and the questions recorded vary among the different interviews, so the interviewer never knows which questions are being actually recorded in a particular interview.

The voice recordings are uploaded to the survey server along with the alphanumeric data registered by the interviewer in each interview. This is done on a continuous basis and no more than seven days after each interview. Two auditors then audit and evaluate every voice recording by means of a software developed for this purpose. They grade a set of qualitative items and enter the respondent's

answer that is heard in the recording. The software then cross-checks these data against the data previously registered by the interviewer during the interview and reports any mismatch.

It is important to highlight that the implementation of the CSQA framework requires constant analysis of the collected data and implies permanent and very active management. On the grounds of the CSQA approach the survey managing team can assess which actions to take in a timely fashion to preserve the quality of the collected data.

The annexes that follow present a guide to the computation of estimates and sampling errors with Stata, a codebook with the organization of the GLFS database and the GLFS Household and Individual questionnaires.

Annex 1

Stata syntax for weighted estimates and sampling error estimation

This annex provides a set of examples of the Stata syntax for computing estimates and the corresponding sampling errors, which account for the GLFS complex sample features (stratification, clustering and weighting due to unequal inclusion probabilities and nonresponse adjustments). For more details, data users are referred to the online Stata manual for the svy command (<http://www.stata.com/manuals14/svy.pdf>).

To specify the GLFS sample design features in any of the datasets, use the command:

```
svyset psu [pweight=weight], strata (stratum)
```

To estimate the overall mean age of household members in dataset GLFS_174_ind, use the command:

```
svy: mean q1_04
```

To estimate the overall mean age by gender, use the command:

```
svy: mean q1_04, over(q1_03)
```

To estimate the mean age of household heads, use the command:

```
svy, subpop (if q1_02==1): mean q1_04
```

To estimate the frequency distribution of ethnic group, use the command:

```
svy: tab q1_06, se ci cv
```

To estimate the frequency distribution of ethnic group by gender, use the command:

```
svy: tab q1_06 q1_03, col se ci cv
```

To estimate the frequency distribution of ethnic group of household heads, use the command:

```
svy, subpop (if q1_02==1): tab q1_06, se ci cv
```

To estimate the regression coefficients of a continuous variable y on two continuous variables x_1 and x_2 , use the command:

```
svy: regress y x1 x2
```

To estimate the regression coefficients of a continuous variable y on two continuous variables x_1 and x_2 and two categorical variables x_3 and x_4 , use the command:

```
xi: svy: regress y x1 x2 i.x3 i.x4
```

To estimate the Gini coefficient of variable y , install the svylorenz Stata command and use the syntax:

```
svylorenz y, ngp(5)
```

Stata syntax that should be used to test the change of an indicator between quarters 3 and 4 2017, accounting for the sample design features and the sample overlapping

```

Annex 2

GLFS codebook

This annex presents the contents of the two GLFS datasets. The first – and by far the most important – contains the answers to the questions in the individual questionnaire. The second reports the information provided about former household members living abroad.

As explained above, some of the variables included in the codebook have been dropped from the public version of the datasets to preserve confidentiality.

Individuals dataset

Individual questionnaire		
Name	Question	Values
hhid	Household ID	String with four substrings: [Region; Cluster; Household Listing Number; Check digit]
member	Member ID	Number
panelid	Individual panel ID	Number
weight	Weight	Number
stratum	Stratum	String with two substrings: [Region; Cluster
psu	Primary Sampling Unit	String with two substrings: [Region; Cluster
block	Rotation block	Number
domain	Estimation domain	Numbers: 1 to 3
quarter	Quarter	Number - 3 digits
week	Fieldwork week	[1-2: Year; 3: Quarter (1 to 4)] Numbers: 1 to 12
region	Region	String - Two numeric characters
ind		String with six substrings: [Region; Cluster; Household Listing Number; Check digit; Household Number; Member Number]
q1_00iq	Member number	Numbers
matchkey2	PARENT_KEY	
memberkey	KEY	
q1_00roster	Q1_00	
area	Coast/Interior	
zone	Urban/Rural	
psu_centroid_lat	(mean) geolat_hq	
psu_centroid_long	(mean) geolong_hq	
result_iq	Final result	
interv	Interviewer ID	
interv_firstname	Interviewer first name	
interv_lastname	Interviewer last name	
team	Team	
tleader	Team leader	
address_list	Address in listing	
q1_01b	Member's last name	
q1_01c	Member's first name	
head_fullname_hq	HH head's name in HQ	
headname_list	HH head's name in listing	
simheadname		Generated by the CAPI application
q1_01	1.01. First name	String

Individual questionnaire		
Name	Question	Values
q1_02	1.02. What is your relation to the head of the household?	[1: Head; 2: Spouse/ partner; 3: Son/daughter; 4: Step/ adopted child; 5: Grand/great-grand child; 6: Son/daughter-in-law; 7: Parent/parent-in-law; 8: Brother/sister; 9: Other relative; 10: Non relative]
q1_03	1.03. Sex	[1: Male; 2: Female]
q1_04	1.04. Age	Numbers
date_birth	1.04b. Date of birth	Generated by the CAPI application
submissiondate	SubmissionDate	
starttime		Generated by the CAPI application
endtime		Generated by the CAPI application
deviceid		Generated by the CAPI application
subscriberid		Generated by the CAPI application
simid		Generated by the CAPI application
devicephonenumber		Generated by the CAPI application
username		Generated by the CAPI application
date		Generated by the CAPI application
pass	Your password:	String
searchhhid	The household ID:	String
enum_ok		Generated by the CAPI application
address	Tick the circle if the ADDRESS and HOUSEHOLD HEAD match the ones in your TRACKING FORM, if not, return and check your answer:	[HH_key: addressname]
duration_iq		Generated by the CAPI application
caseid		Generated by the CAPI application
timestarted	timestarted	Generated by the CAPI application
result_other_specify	Other reason, specify:	String
q1_05	1.05. What is your marital / union status?	[1: Not Married/ Never lived together; 2: Living together; 3: Married; 4: Separated; 5: Divorced; 6: Widowed]
q1_06	1.06. To what ethnic group do you belong?	[1: African/ Black; 2: Mixed; 3: East Indian; 4: Amerindian; 5: Chinese; 6: Portuguese; 7: White; 8: Other]
q1_07	1.07. In which country were you born?	[1: Guyana; 2: Other Caribbean country; 3: South/Central America/Mexico; 4: U.S.A.; 5: Canada; 6: Great Britain; 7: Other European country; 8: Asia; 9: Africa; 10: Other]
q1_08	1.08. How many years have you been residing in Guyana on a continuous basis?	Numbers
q1_09	1.09. In which region was your mother living when you were born?	[1: Region 1; 2: Region 2; 3: Region 3; 4: Region 4; 5: Region 5; 6: Region 6; 7: Region 7; 8: Region 8; 9: Region 9; 10: Region 10; 11: Do not know]
q1_10	1.10. Where were you living five years ago?	[1: In this city/village; 2: In another city/village of this Guyana region; 3: In another Guyana region; 4: In another country]
q1_11	1.11. Have you EVER attended school?	[1: Yes; 2: No]
q1_12	1.12. Are you now enrolled in a school or in an educational institution?	[1: Yes; 2: No]
q1_13	1.13. What is the highest level of education that you have ATTENDED?	[1: Pre-primary; 2: Primary; 3: Secondary; 4: Post-secondary; 5: University / Tertiary]
q1_14	1.14. What class did you COMPLETE?	[1: None; 1: None; 2: Prep A & B/ Grds 1 & 2; 3: Std 1/Grd 3; 4: Std 2/Grd 4; 5: Std 3/Grd 5; 6: Std 4/Grd 6; 6: Std 4/Grd 6; 7: Frm 1/Grd 7; 8: Frm 2/Grd 8; 9: Frm 3/Grd 9; 10: Frm 4/Grd 10; 11: Frm 5/Grd 11; 12: Frm 6/Grd 12]
q1_15	1.15. What is the highest post-secondary level/degree that you have COMPLETED?	[1: None; 2: Technical/Vocational Certificate or Diploma; 3: University Certificate or Diploma; 4: Bachelor's degree; 5: Post graduate Certificate or Diploma; 6: Masters; 7: Doctoral]
q1_16	1.16. What is the highest examination that you have passed?	[1: None; 2: School leaving; 3: College of Preceptors (CP); 4: Junior Cambridge Cert; 5: CXC Basic; 6: GCE O' levels/CXC 1-2; 7: GCE O' levels/CXC 3-4; 8: GCE O' levels/CXC 5+; 9: High School/Senior Cambridge Certificate; 10: GCE A' levels/CAPE A: 1-2; 11: GCE A' levels/CAPE A: 3+]

Individual questionnaire		
Name	Question	Values
q2_01	2.01. In the LAST 12 MONTHS have you received training for any occupation (for example: on computers, cosmetology, hairdressing, mechanics, etc.)?	[1: Yes; 2: No]
q2_02	2.02. In what subject was your last training?	String
q2_03	2.03. Where did you acquire MOST of this training?	[1: Apprenticeship; 2: On the job; 3: Correspondence Course; 4: Virtual/Internet Learning; 5: On-site private institution; 6: On-site government; 7: Other]
q2_04	2.04. In the LAST 7 DAYS, did you do any work for a wage, salary or tips EVEN IF ONLY FOR ONE HOUR?	[1: Yes; 2: No]

GLFS electronic questionnaires

GLFS 174 HQ

Field	Question	Answer
filter_enum		
enum_note	Enumerator, enter (...):	
searchENUM (required)	Your ID:	
PASS (required)	Your password:	
searchHHID (required)	The household ID:	
filter_password		
filter_password > filter_HH		
address (required)	Tick the circle if the ADDRESS and HOUSEHOLD HEAD match the ones in your TRACKING FORM, if not, return and check your answer:	HH_key addressname
geopoint (required)	[ENUMERATOR: Collect building's GPS coordinates] Accuracy <= 25 meters	
Result (required) <i>If 1 ► Members ; If 2 or 3 ► Observations</i>	A. Attempt result:	1 Interview started 2 Nobody at home 3 No competent respondent 4 Other
Other_Result (required) <i>If >=1 and <=6 ► Observations</i>	B. Other attempt result:	1 Vacant dwelling 2 Dwelling demolished /under construction / etc. 3 Dwelling not found 4 Not a dwelling 5 Party / Funeral 6 Refusal 7 Other
Other_Result_Specify (required) <i>► Observations</i>	Other result, specify:	
filter_password > filter_HH > FILTER_A		
Members (required)	How many people usually live in this household?	
filter_password > filter_HH > FILTER_A > Member number (1)		(Repeated group)
filter_password > filter_HH > FILTER_A > Member number (1) > Member_group		
q1_00 (required)	1.00. Member number	
q1_01	1.01. Full names of household members <i>Let's start/continue with the first/second/third/fourth... member</i>	
q1_01b (required)	Last name	
q1_01c (required)	First name	
filter_password > filter_HH > FILTER_A > Member number (1) > SECTION_1		
q1_02 (required)	1.02. What is [q1_01c]'s relation to the head of the household? <i>READ OPTIONS</i>	1 Head 2 Spouse/ partner 3 Son/daughter 4 Step/ adopted child 5 Grand/great-grand child 6 Son/daughter-in-law 7 Parent/parent-in-law 8 Other relative 9 Non relative
q1_03 (required)	1.03. [q1_01c]'s Sex	1 Male 2 Female
q1_04 (required)	1.04. [q1_01c]'s Age <i>If less than 1 year write 0 (zero)
 Completed years</i>	
Date_Birth (required)	1.04b. Date of birth	
filter_password > filter_HH > FILTER_A > Member number (1) > FILTER_FIFTEEN		
<i>Ask only if q1.04<15</i>		
q1_05 (required) <i>Ask only if q1.04>9</i>	1.05. What is [q1_01c]'s marital/ union status? <i>READ OPTIONS</i>	1 Not Married/ Never lived together 2 Living together 3 Married 4 Separated 5 Divorced 6 Widowed
q1_06 (required)	1.06. To what ethnic group does [q1_01c] belong? <i>READ OPTIONS</i>	1 African/ Black 2 Mixed 3 East Indian

		4 Ameridian
		5 Chinese
		6 Portuguese
		7 White
		8 Other
q1_07 (required)	1.07. In which country was [q1_01c] born?	1 Guyana
	<i>If 1 ►q1.09</i>	2 Other Caribbean country
		3 South/Central America/Mexico
		4 U.S.A.
		5 Canada
		6 Great Britain
		7 Other European country
		8 Asia
		9 Africa
q1_08 (required)	1.08. How many years has [q1_01c] been residing in Guyana on a continuous basis?	
	<i>►q1.10</i>	
q1_09 (required)	1.09. In which region was [q1_01c]'s mother living when s/he were born?	1 Region 1
		2 Region 2
		3 Region 3
		4 Region 4
		5 Region 5
		6 Region 6
		7 Region 7
		8 Region 8
		9 Region 9
		10 Region 10
		11 Don't know
q1_10 (required)	1.10. Where was [q1_01c] living five years ago? <i>READ OPTIONS</i>	1 In this city/village
		2 In another city/village of this Guyana region
		3 In another Guyana region
		4 In another country
		5 Was not born yet
q1_11 (required)	1.11. Has [q1_01c] EVER attended school?	1 Yes
	<i>If 2 ►q7.01</i>	2 No
filter_password > filter_HH > FILTER_A > Member number (1) > FILTER_FIFTEEN > Education		
q1_12 (required)	1.12. Is [q1_01c] now enrolled in a school or in an educational institution?	1 Yes
		2 No
q1_13 (required)	1.13. What is the highest level of education that [q1_01c] has ATTENDED?	1 Pre-primary
	<i>If 1 ►q7.01</i>	2 Primary
		3 Secondary
q1_14 (required)	1.14. What class did [q1_01c] COMPLETE?	1 None
	<i>►q1.16</i>	2 Prep A & B/ Grds 1 & 2
		3 Std 1/Grd 3
		4 Std 2/Grd 4
		5 Std 3/Grd 5
